

RULE SHEET

A game by Christian Kudahl & Thomas Weber
for 2 to 5 players, ages 8 and up

Bloom Kingdom

Game Overview

Flourishing times in the kingdom! Turn by turn, all players simultaneously choose one card from their hand to add to the common display. The more cards of a character come into play, the more valuable that character becomes. Some cards have effects that can change the display and only the two cards remaining in your hand at the end of a round will score. Do you strengthen a character, or do you try to gain their victory points? And are the conditions met for a particularly lucrative scoring?

Whoever scores the most victory points over three rounds wins.

Components

100 Character Cards – 10 copies of each character:

Character Card Breakdown

Instant effects: Half of the cards show an instant effect below the character. Resolve it when the card is added to the display.

Initiative: Some cards show an initiative number above the character. It determines the order in which instant effects resolve. First, add all cards without an initiative number to the display, then add all cards with initiative in ascending order (highest initiative last).

Scoring effects: Each card shows at the bottom edge how it scores if it is kept as a scoring card.

10 Reference Cards

On the reference cards, you can look up all instant and scoring effects of the characters at any time.

Setup

- Shuffle all **character cards** and deal **6 hand cards** to each player face down. Place the remaining cards face down to form a draw **deck**. Leave enough space for a 9-column **display** (one per character except the Jester, who is placed into other characters' columns).
- In two-player games*, instead deal 8 hand cards to each player face down.

- Everyone takes a **reference card**.
- Have pen and paper handy to record your points after each round (or use the digital scoring sheet in our **Deep Print Games App**).

To record and tally your scores, we recommend the **Deep Print Games App**. Here, you can find virtual scoring pads for this and many more of our games. Get it for free on the App Store and on Google Play.

Playing the Game

A game of *Bloom Kingdom* is played over **three rounds**, each with multiple turns. At the end of each round, when you have just two cards left in hand, you score those cards. After scoring, you'll draw a new hand and begin the next round, while the cards in the display remain there for the rest of the game.

1. PLAY CARDS

At the start of each turn, choose a card from your hand and place it **face down** in front of you. Once everyone has done so, reveal your cards simultaneously.

2. ADD THE PLAYED CARDS TO THE DISPLAY

Add the played cards to the common display, forming a separate column for each character type. If a character type is already in the display, add additional matching character cards to the same column. Place the cards in such a way that the total number of cards is always visible.

First, add all cards with no initiative number to their columns. Then add all cards with an initiative number in **ascending order** to their columns. When a card with an instant effect is added, its player resolves that effect immediately.

Once all cards have been added, the next turn begins.

The round ends when everyone has only two cards left in hand.

⚡ The Instant Effects ⚡

Unicorn (no initiative): Draw one card from the deck into your hand. Then choose a card in your hand and return it face down to the box.

Note: All players that played a Unicorn can perform its instant effect simultaneously, drawing their cards in no particular order.

Knight (10–19): You may remove one Dragon from the display and place it back in the box.

Note: If there are any Jesters in the Dragon column, place one of those Jesters back in the box instead.

Wizard (20–29): You may remove any card from the display and place it back in the box.

Note: If there are any Jesters in the chosen column, place one of those Jesters back in the box instead.

Jester (30–39): Place the Jester in any column that already contains at least one card. It now counts as a character of that column.

Note: Place Jesters under the existing cards so that the actual character remains fully visible, while keeping the total number of cards in each column discernable.

Special case: If there are no characters in the display yet, place the Jester back in the box.

Fortune Teller (40–49): Choose a player and select one of their hand cards at random. Look at it secretly, then return it to that player.

END OF A ROUND AND SCORING

The round ends at the end of the turn when you have only two cards left in hand. These two cards are your **scoring cards**, for which you now receive **victory points (VP)**.

Each scoring card shows a scoring effect, which scores the cards in the display in its own way. Determine the victory points for each of your scoring cards and record them. Then place your scoring cards back in the box.

✿ The Scoring Effects ✿

Jester: If at least one King is among the other players' scoring cards (not your own!), score 4 VP per King in the display.

King: If there are no Jesters among the other players' scoring cards (not your own!), score 4 VP per King in the display.

Queen: Score 3 VP per Queen + King pair in the display.

Unicorn: If no column has more cards than the Unicorn column, score 3 VP per Unicorn in the display.

Knight: Score 5 VP for each Knight + Queen + Unicorn trio in the display.

Farmer: If there are at least as many Farmers as Knights in the display, score 3 VP per Farmer in the display.

Noble: If there are at least as many Farmers as Nobles in the display, score 4 VP per Noble in the display.

Wizard: Score 3 VP per Wizard + Noble pair in the display.

Dragon: Score 4 VP per Dragon in the display.

Fortune Teller: Score 2 VP per Fortune Teller and 2 VP per Dragon in the display.

Don't forget: Each Jester in the display counts as a character of that column and is included in scoring.

Scoring example:
The display looks like this at the end of the round.

Robin, John, and Marie reveal their scoring cards:

0 VP

6 VP

Robin receives 0 VP for her Noble because there are fewer Farmers than Nobles in the display. There are two Noble + Wizard pairs in the display, so she receives 2 x 3 = 6 VP for her Wizard.

8 VP

0 VP

John receives 4 VP for each Dragon in the display for his Dragon, so 8 VP in total. For his King, he receives 0 VP because Marie has a Jester as a scoring card.

8 VP

0 VP

Marie speculated well with her Jester because John has a King as a scoring card. She receives 4 VP for each King, so 8 VP in total. For the Unicorn, she receives 0 VP because there are columns in the display that have more cards than the Unicorn column.

After you have all recorded your victory points, the round ends. If you haven't played three rounds yet, deal everyone 6 new hand cards from the deck (8 with two players) and start the next round. All cards in the display remain where they are.

End of the Game

The game ends at the end of the third round. Whoever has the most victory points in total wins. If tied, the tied players share the victory.
